Hammad Ali

Backend Developer | Lahore, Pakistan
Email | +923049430705 | LinkedIn-Profile | Github-Profile

Summary

Backend Developer (Node.js) with hands-on experience in **MVC, Layered Architecture, and Repository Pattern**. Skilled in building **scalable RESTful APIs**, managing databases efficiently, and writing clean, maintainable code. Currently pursuing a **Bachelor's in Computer Science**, with a strong focus on modular and high-performance backend systems.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), C++, SQL
Frameworks & Libraries: Node.js, MVC Architecture, Layered Architecture, Repository Pattern, REST API Development
Databases: MongoDB, MySQL, SQL
APIs & Tools: Postman, Git, GitHub, VS Code
Authentication & Security: JWT Authentication, Role-Based Access Control (RBAC)

EDUCATION

Bachelor of Science in Computer Science 08/2022 - Ongoing
Superior University Lahore Gold Campus

- **CGPA 3.12**

EXPERIENCE

Backend Developer 07/2025 - Ongoing
HuboWeb Technology (Pvt.) Ltd Lahore, Pakistan

- Working on a **SaaS-based social media management platform** that connects multiple platforms into a **single unified dashboard.**
- Developed backend services for posting and managing content across **Facebook, Instagram, Twitter (X), and LinkedIn.**
- Designed and implemented **authentication and authorization systems** using **Layered Architecture** and **Repositor Pattern.**
- Built and maintained **secure, scalable RESTful APIs** for internal management and platform integrations.
- Optimized **MySQL and MongoDB** queries, improving application performance and data handling efficiency.

Collaborated in **Agile sprints**, participating in code reviews and ensuring production-ready backend code.

Backend Developer Internship 04/2025 - 06/2025
HuboWeb Technology (Pvt.) Ltd Lahore, Pakistan

- Completed a **3-month intensive backend internship** focused on **Node.js development** and practical software engineering skills.
- Contributed to the development of an **internal employee management system**, including **backend logic, RESTful APIs, and database operations**.
- Gained hands-on experience in **user authentication, role-based access control (RBAC), and data validation**.
- Worked with **MySQL and MongoDB**, optimizing queries and managing data flow for reliable system performance.
- Enhanced understanding of **structured code design, debugging, and API workflows**, adhering to best practices for clean and maintainable backend development.
- Participated in **code reviews and collaborative tasks**, building familiarity with Agile development processes.

PROJECTS

Trounce
Link: https://github.com/akhtarabbas-909/TrounceAPI

- Developed a **SaaS-based backend application** using **Node.js** and **MVC architecture**, designed to connect multiple social media platforms within a **single unified dashboard**.
- Implemented **JWT-based authentication** with email login, ensuring secure access to the platform.

- Designed and enforced **role-based access control (RBAC)** with roles such as **Agency** and **Workspace**, supporting multi-tenant usage.
- Integrated **Stripe payment gateway** to manage subscriptions and control feature access.
- Built backend integrations for **Facebook, Instagram, Twitter (X), and LinkedIn**, enabling users to publish posts directly from the dashboard.
- Developed and maintained **RESTful APIs** following MVC best practices for scalability and maintainability.
- Ensured clean, modular, and production-ready backend code through proper validation, error handling, and testing.

Internal Management System

Link: https://github.com/Moughees110/Internal-Management-System

- Developed a backend-driven **internal management system** to support organizational workflows.
- Implemented **employee attendance management**, task assignment, and role-based functionality.
- Designed and enforced **role-based access control (RBAC)** to restrict system features based on user roles.
- Built **RESTful APIs** to manage employees, attendance records, and task assignments.
- Handled backend validation, error handling, and data integrity to ensure reliable system behavior.
- Focused on clean, maintainable backend code suitable for real-world internal business applications.

Authentication App

Link: https://github.com/akhtarabbas-909/AuthenticationApp

- Developed a **complete authentication system** using **Node.js** with **JWT-based login and authorization.**
- Implemented **user signup and login via email**, following **Layered Architecture** and the **Repository Pattern** for clean separation of concerns.
- Designed structured layers including **Controllers, Services, Repositories, and Models** to improve maintainability and scalability.
- Implemented secure password handling, input validation, and centralized error handling.
- Built **RESTful APIs** for user registration, authentication, and session management.
- Focused on writing clean, modular, and testable backend code aligned with production standards.
